THE HISTORY OF RADIO ON CD-ROM

Radio Era Archives produced the *QST-VIEW* series of CD's for the American Radio Relay League (ARRL) and over 1/2 million CD's have been sold. ***QST*** Magazine has been continuously published since 1915. We are now proud to announce that this small mountain of CD's (about 35) is now availble exclusively from REA (All Sets) ! Every magazine published from 1915 to 1994, front cover to back cover, every article and column, all accessible with our database search engine.

QST-VIEW CD Edition truly captures the history of radio in 11 volumes. All CD's warranted to work on all Windows platforms from Windows 95 through XP. Each set is $ 39.95 and we have all sets in stock. The sets are: 1915-1929, 1930-1939, 1940-1949, 1950-1959, 1960-1964, 1965-1969, 1970-1974, 1975-1979, 1980-1984, 1985-1989, 1990-1994. Each set of years is a self-contained set so you can operate one or all sets together. Now that large capacity hard drives are so inexpensive, the 36 CD's can be loaded on about 20Gb of hard disc space for instant searching and viewing without having to swap discs! Full information is provided with each purchase and *QST-VIEW* has on-line instructional help for operating the QST-VIEW browser!

EACH SET $ 39.95 (specify the years)
ALL 11 SETS $ 379
S&H USA for first set is $ 5.00, add $ 1.00 each set thereafter
S&H Export first set is $ 15.00, add $ 2.00 for each set thereafter

---

2009 1/2 PRICE SPECIAL (while supply lasts)

Don't forget, we have the entire John Rider's Perpetual Troubleshooters Manuals on a single DVD. All 23 Volumes of the Riders available at the click of a mouse! Over 120,000 different model radio schematics and related service information in an easy to use DVD. **Thousands sold at $ 199. SPECIAL $ 99 + $ 6.00 S&H in the USA, add $12 for worldwide delivery. Order Now while supply lasts !**

We now have a small mountain of vacuum tubes at very competitive prices - Thousands sold since our first posting of these tubes. All types including receiving and transmitting types. Tube price listings on the web: http://www.radioera.com/tubes.asp

SCHEMATIC DIAGRAM & MANUAL SERVICE
Over a Million schematics & 100,000 manuals and growing! Schematics and most manuals may be emailed instantly via the internet

POSTMASTER: Send address changes to Antique Radio Classified, PO Box 1558, Port Washington, NY 11050.

Printed in U.S.A.

PURPOSE. Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

Publisher/Editor: Jon Kummer, **Publisher/Editor Emeritus:** John Terrey, **Founding Publisher/Editor:** Gary B. Schneider, **Contributing Editor:** John Terrey, **Contributing Writers & Consultants:** Mike Adams, Richard L. Arnold, Richard Begbie, Ray Bintliff, Norman Braithwaite, Ray Chase, Dave Crocker, Alan Douglas, Richard Foster, Andrew Hayden, Jim Kreuzer, Phil MacArthur, Ron Ramirez, Gary Schneider, Daniel Schoo, Frank White.

CONTACTING ANTIQUE RADIO CLASSIFIED
All correspondence should be sent to:
A.R.C., PO Box 1558, Port Washington, NY 11050
Telephone: (866) 371-0512; Fax: (516) 883-1077
Email: ARC@antiqueradio.com
Web: www.antiqueradio.com

Your ads, renewals, letters, etc. can be handled faster and more efficiently if your name address and SUB# are written on each.

Unfortunately, A.R.C. is not staffed to answer all letters with questions about antique radios or requests for advice. However A.R.C. does solicit letters of interest from its readers and publishes them as space permits.

WEB. Antique Radio Classified issues are published on the web as PDF files for subscribers. Web-only subscriptions are available. One issue is available for viewing by all on the web as a sample.

ADVERTISING. Display and Classified advertising rates and artwork specifications are available on the web site.

PAYMENT. Please include full payment with your order or ad. A.R.C. does not carry accounts; all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds. Checks drawn on a U.S. bank, money orders, VISA, MasterCard, American Express, Discover or PayPal. Make check out to "A.R.C." Subscriptions will be prorated to amount sent if amount is incorrect. ***For your protection, no credit cards by e-mail; use our secure website instead.***

CHANGE OF ADDRESS. Please notify us in advance of a change of address. Send your new address, your old address, your SUB# and the effective date of the change.

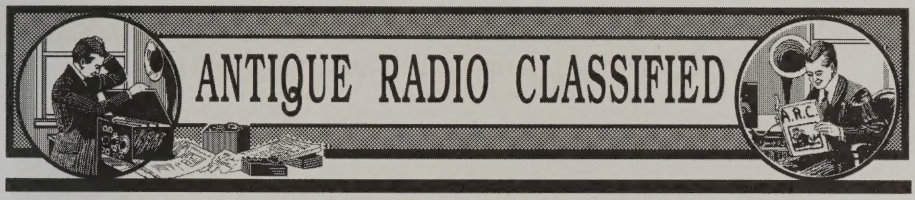
PUBLISHING RIGHTS. Unless other arrangements are made: (1) All received materials (ads, articles, letters, correspondence, email, photos, artwork, etc.) become the property of A.R.C., may be edited, combined with other material, published, and will not be returned. (2) For all received materials, A.R.C. is granted publishing and reprint rights in all forms of media including the monthly printed magazine, internet, etc. (3) Publication is subject to approval by A.R.C. and to time and space constraints.

MAILING OF ISSUES. U.S. subscribers can receive A.R.C. by First Class or Periodicals mail (Periodicals is the way most magazines are mailed). Mailing dates change each month.

ETHICS. No person involved in the production of A.R.C. is to act on any information in the magazine until the first delivery day after local copies are mailed.

DISCLAIMER. The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

NOTICE. Subscription rates, frequency of publication, content, policies, size and ad details, and rates are subject to change at any time by A.R.C.



Editor's Comments

Welcome to Antique Radio Classified 2011. Happy New Year to everyone!

This is the first time I've written in this space and have been trying to think about what to say. Well, I like to keep it simple so here we go.

I'm looking forward to keeping A.R.C. as the premier publication and web site for the collector of old radios and related items. This goal can be accomplished even with the business pages of newspapers and television news stating the economy is "soft." In recent years print magazines have been hit hard by the economy and the rise of the Internet. But I see it differently – especially for "specialty interest" magazines like A.R.C. Many of these types of publications are flourishing and growing because they serve a narrow community of enthusiasts who are passionate about their interests.

How do we achieve these goals for the magazine and web site?

Starting with this issue, the magazine is returning to the monthly format. It is important to have a steady supply of articles to excite the reader and challenge them to explore their passion for whatever areas interest them. We need articles to keep our traditional core readers as well as attract new subscribers. By expanding topics to include more articles on vintage restoration (electronics & cabinets), vintage military radio equipment, history, vintage ham equipment, and vintage audio (tube) we can attract that new reader. Remember, expanding the range of articles will not be at the expense or reduction of our traditional articles on vintage radio – it will be in addition to the traditional articles!

Many people I've spoken to have asked for subscriptions periods of more then one year. Starting immediately, we've added discounted 2-year and 3-year subscription rates. Don't forget that we also have "online only" subscriptions with full print subscription privileges such as free classified ads.

Speaking of the web site, we will slowly be upgrading it for easier navigation. Remember, on the web site you have the ability to look at past auction (searchable) results, ads, and back issues. Don't forget to visit the A.R.C. Marketplace to purchase your books, DVDs, and to renew or start a new subscription. Again, at our readers' request, we've added PayPal as an additional payment method to the standard credit card payment. Of course, you can always order by check through the mail or call us on the telephone at 866-371-0512.

A.R.C. will be in attendance at more "Meets" this year. It's important for us to meet our readers and to hear what you have to say. I would like to travel to many meets but for this year it will primarily be limited to the eastern part of the country.

There will be no increase in subscription rates, advertising rates, or anything sold on the web site in the A.R.C. Marketplace.

If your radio club is planning an event let us know. We want to help promote your event as well as list information on how to contact and join your club. At the office I've received many calls asking how to reach collectors in different areas of the country. Promoting your event will be good for club growth, meet attendance, and help increase your sales.

Also, send in your photographs for the "Photo Review." I remember the first time I had a photo published. What a charge!

This month brings us some excellent articles ranging from restorations to auction reports to nice finds to unusual radios and equipment.

Robert Lozier discusses the restoration of his Cleartone Model 60 that won ribbons at Charlotte 2010.

I didn't think there could be anything else said about the Crosley Pup. Dave Crocker takes us back to Crosley's World War II efforts and shows us a 1942 Crosley Pup!

For the transistor radio collector, Phil MacArthur helps us look for quality transistor sets. Transistor sets are very collectable and can "fetch" good money on certain Internet web sites.

Also in "With the Collectors," we take a look at the Chicago Radio Laboratories AD-1.

Our Auction Reports this month are from the John Wiley auction in Olney, IL, the William Wilson auction in New Harmony, IN, and the Estes auction in Burbank, OH. Lots of great radios and surprising prices!

Again, I need everyone's help to achieve a healthy and independent magazine. Please send your suggestions or ideas.

Thank you for keeping A.R.C. the number one publication serving the antique and vintage radio community!

Jon Kummer,
Editor and Publisher

RESTORATION TOPICS

Cleartone Model 60 Restoration

BY ROBERT LOZIER

Robert Lozier entered this set in the Charlotte 2010 and AWA 2010 conferences and won ribbons in each. In addition, A.R.C. ran it on our September/October 2010 cover. Since Robert had thoroughly documented the set in his binder of documentation, we asked him if he would adapt his restoration description into an article. The response was an enthusiastic "yes." This article also shows how good documentation helps to make a prize-winning old equipment contest entry.

Robert is one of the best restorers, so take heed of his restoration procedures. (Editor)

Figure 1. The restored Cleartone Model 60 in the AWA Conference old equipment contest.

This article is about the restoration of a Cleartone Model 60 battery set. The final result can be seen in Figure 1, a photo of the set entered in the old equipment contest at the Charlotte 2010 meet. I documented the step-by-step restoration as presented here in this article.

Preservation of history is always the goal. Too often attempts at restoration obscure or eliminate historical detail. One has to make determinations as to whether to restore or simply clean. In the present case, the receiver's appearance was so poor that it was not presentable, and deterioration would continue unless it was cleaned and protected.

THE FRONT PANEL

The yellow brass panel is photo engraved. I had wondered why this company turned out radios with this distinctive feature. As it turns out, the factory where these radios were built was owned by the Herschede Hall Clock Company. This company was a major supplier of large clock movements for hall clocks, and the radio panels were made with the same machinery used to make the large elaborate clock faces. Figure 2 shows a Herschede Hall grandfather clock

At the factory, the brass had been given a fine lateral brushed finish and then "pickled" in strong acid to obtain a buttery yellow color. Apparently, the brass was then varnished. It had become heavily oxidized and was no longer presentable, as shown in Figure 3.

I stripped the varnish and used a mild acid (sodium bisulfite) to remove the oxidation. Brass is primarily an alloy of copper and zinc. The oxides of these two metals are attacked at different rates by the acid, and this results in there being an excess of copper at the surface resulting in a pink cast to the brass. (Apparently, this can be eliminated by the application of strong acid for brief periods of time using dip or spray wash setups that exist only in commercial metal finishing operations.)

Sanding the surface with fine sandpaper and mineral spirits will help, but there will still be some coloring of the brass by the excess copper. The photo engraving is not deep, so you cannot sand very much without risking loss of engraving depth that will make filling of the engraving difficult or impossible. You have to find that happy medium.

After cleaning with the acid and flushing off the excess, I force-dried the panel and applied a thin coat of a special lacquer when the air temperature was about 40 degrees F. This made it easier for a thin coat of material to level-out before the solvent vehicle evaporated.

I filled the engraving with acrylic black paint and simply wiped away the excess with an old, damp handkerchief. The water-base paint did not affect the lacquered brass, but the pigment in the paint does scuff the clear lacquer just enough to be noticed in strong light. So after the acrylic paint dried completely, I buffed the panel lightly and then applied a heavy coat of the lacquer to seal everything and make the scuffing disappear. Figure 4 shows the finished product.

Yes, you can still see some pink, but you can also see some of the original intent of the brushed grain.

Figure 2. A Herschede Hall grandfather clock.

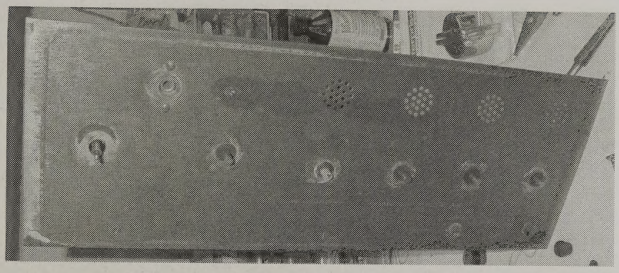


Figure 3. The Cleartone Model 60 panel as found.

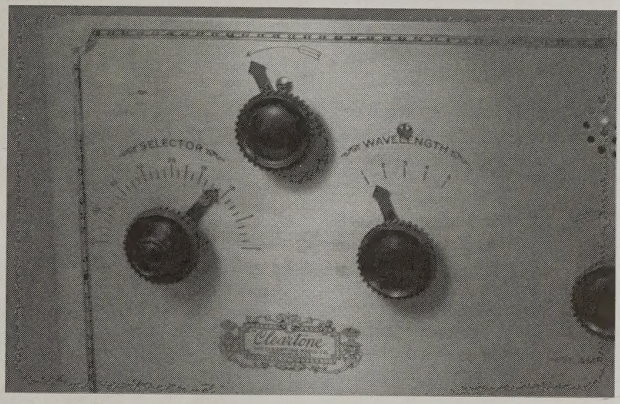

Figure 4. The Cleartone Model 60 panel refinished.

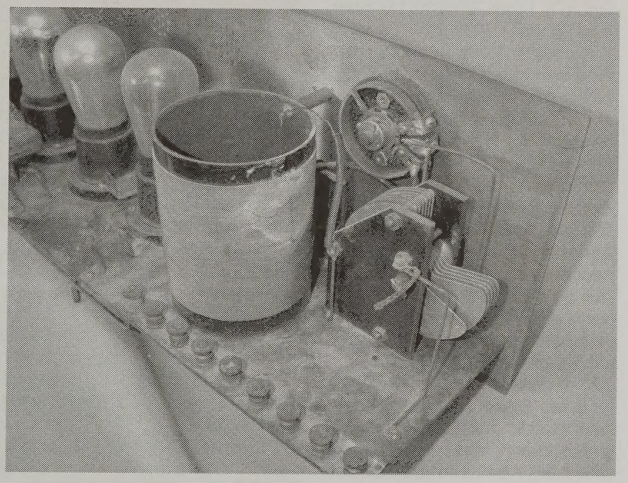

Figure 5. The inside was dirty and the remnants of a dirt dauber's nest can be seen on the side of the tuning coil.

THE TUNING COIL

The tuning coil had a dirt dauber's wasp nest built on one side. See Figure 5. Many years ago I broke off most of the clay but there was still some clay left. I used a hog bristle brush to help me apply soapy water to the coil and then immediately vacuum off the soil and solution using a miniature vacuum brush. (This is just a miniature version of carpet steam cleaning. I did not want the soil to penetrate the cotton and dissolve any copper oxides that would discolor it.) I immediately dried the area with my trusty Makita HG1100 hot air gun which I highly recommend because of its excellent range of temperature adjustment.

TERMINAL STRIP LABELS

There was only a tiny piece of the paper label that identifies the connections. Just one word is visible "ANTENNA," but it gave me precise information on the size and font style to use. Merrill Bancroft sent me a photo of the strip, and I was then able to recreate the label almost perfectly using AutoCad 2000. Figure 6 shows the result.

OTHER PARTS

As you can see in Figure 7, there is severe loss of nickel plate on the audio transformer covers and binding posts. Here I have not yet decided on whether it is better to replate them or not. Right now they are just protected with clear lacquer.

I removed the rheostats, tuning coil, tuning condenser, and grid leak assembly. This set is a bit of a dog to take apart because everything is soldered together.

(Continued on following page)

(Cleartone 60 restored, continued)

I then ran these items through the ultrasonic cleaner.

The rest of the chassis is Bakelite, and you absolutely cannot clean Bakelite with caustic cleaners like Fantastic, Super Clean, and other "purple cleaners." The cleaner will dissolve the phenol resins. (Have you noticed that a white rag will turn brown when you wipe off anything Bakelite if you use such cleaners? That is the resin leaving the Bakelite.)

So, I cleaned the chassis first with Go-Jo or Goop waterless hand cleaner to loosen soil and then rinsed off and dried with the heat gun. I then used alcohol to remove old rosin flux, old shellac, and anything the Goop did not attack. Then I could use the mild acid to clean off excess oxidation on the buss wire and screws that are soldered in place.

After a thorough rinse and forced drying with the hot air gun, I could paint on satin clear lacquer here and there to protect exposed metal from new oxidation for some decades to come.

I then remounted all the parts as shown in the top chassis view in Figure 8. I then soldered the parts back in place. This leaves a lot of shiny solder joints that just seem to scream out "new repair." Fortunately, this can be easily solved by chemically aging the solder.

Clean the joint with alcohol to remove flux. Then use a fine brush with brass or fiberglass bristles to dull the solder slightly. Saturate a Q-Tip with a drop of Brass Black and wipe it on the joint. Within 20 seconds or so the solder will turn dull as if the joint were made 80 years ago. Use cotton balls saturated with distilled water to wipe off the excess Brass Black after it has done its job.

Brass Black is a solution containing selenous acid. It is used in the jewelry and metal finishing industries. A bottle will last a lifetime for our purposes. Years ago I paid about $20 for a 16 oz. bottle and still have 90 percent remaining. Treat it with respect since it works as a poison that penetrates the skin.

THE CLIP-IN RADIO FREQUENCY TRANSFORMER

The transformer you see here is a replica. Thanks to Gary Alley, I was able to measure one of his transformers and make an exact

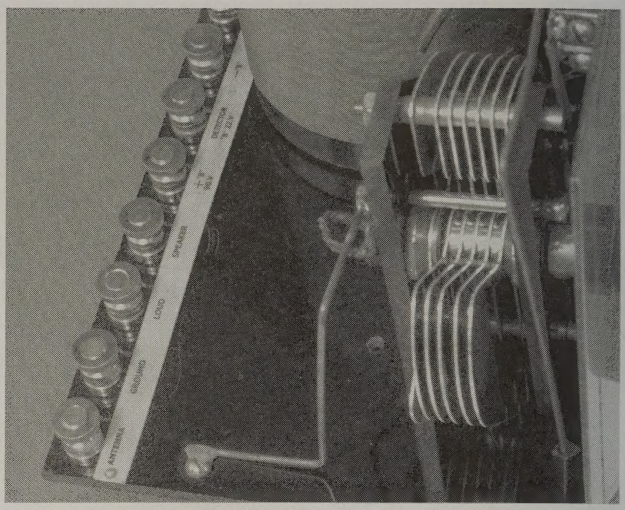

Figure 6. The finished terminal strip label.

Figure 7. The unrestored inside view showing the loss of nickel plate.

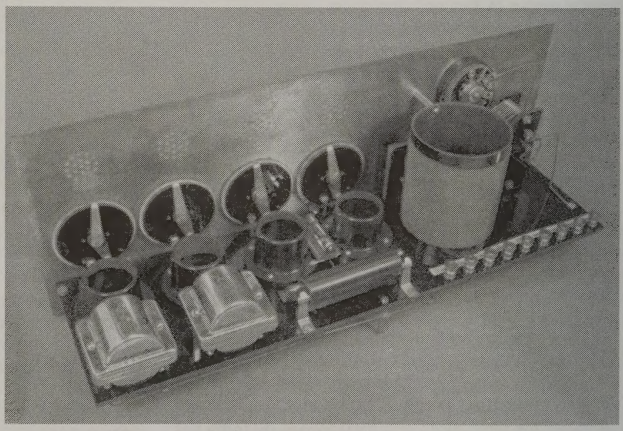

Figure 8. The restored chassis and components.

copy. I have a dimensioned drawing I'll be happy to send to anyone. The transformer can be seen in the lower center of Figure 9.

THE CABINET

I did not refinish the cabinet, but gave it only a thorough cleaning with Go-Jo and a little touch-up with stain here and there. I finished off with bees wax & turpentine. If the weather had been warmer, after the touch-up, I would have applied a coat of boiled linseed oil for 20 minutes and then wiped it off completely and let the cabinet stand for a week before giving it a coat of wax. I can still do that later since all I need do is to go over the cabinet with Go-Jo again. Figure 10 shows the restored set.

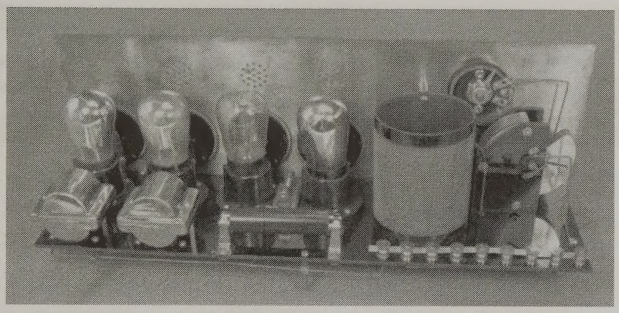

Figure 9. A chassis view of the restored Cleartone Model 60.

Figure 10. The restored Cleartone Model 60.

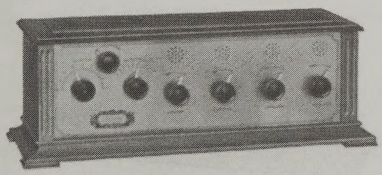
HOW DOES IT PERFORM?

I don't know exactly because one of the audio transformers is open. But simple analysis of the circuit shows that, without regeneration or multiple TRF stages, this was good enough to get only the local stations with loudspeaker volume. I'm thinking that advertising hype about logging 20 to 35 stations in a single evening was likely only in a very quiet room, or on that rare winter night while using good headphones. In fact, the advertisement, shown in Figure 11, states that the performance equals any receiver in "locations removed from powerful broadcasting stations."

(Robert Lozier, KD4HSH, 600 E. Green St., Monroe, NC 28112)

Robert Lozier, a collector of broadcast receivers for over 40 years, is interested in the development of foreign radio technology. He has presented lectures on radio collecting in Italy, as well as on restoration and preservation techniques. He spends his free time in developing restoration techniques and in preparing radio artifacts for exhibition.

Cleartone Goldcrest Models



Model 60—$60

The Goldcrest Cleartone is a four tube receiver that has given wonderfully satisfactory service in the past, and which has been improved in many details since its introduction. In locations removed from powerful broadcasting stations it will equal any receiver in efficiency.

The set is non-regenerative and does not re-radiate. It has one stage of transformer-coupled radio frequency, detector, and two stages of audio frequency, and from the standpoint of volume and sensitivity is equal to any receiver using four tubes.

Either dry cell or storage battery tubes may be used. The instrument, like all Cleartone products, is equipped with a universal rheostat for use with any type of tube.

The cabinet is of solid mahogany, and the panel is a beautiful gold finish — a most attractive combination. You will be genuinely proud to own this receiver.

Figure 11. The Cleartone Model 60 as it appears in an advertising brochure.

WITH THE MANUFACTURERS

Still Another Crosley "PUP"

Adding to the Litter

BY DAVE CROCKER

As Dave Crocker's articles keep pointing out, there was no end to Powel Crosley's ingenuity. Here are other examples — a Crosley Pup that is not a radio, plus various war effort vehicles. (Editor)

We are all familiar with Crosley's first "PUP," the 1-tube radio of 1925, as shown in Figure 1. This was Powel's second idea of an inexpensive set aimed at the 1920s youth market. The first was the simple Harko crystal set of 1922. The 1925 all-metal PUP sold for just $9.75. Powel made sure it would be sold for just under the magic price of $10. It was a tremendous success.

The Crosley Radio Company's main objective was to produce a radio receiver the average American public could afford — a kind of "Model T" of radios. And so, in June of 1932, Crosley announced an entry-level radio, again called the PUP. This was a 4-tube, superheterodyne receiver in a silver-gray metal cabinet. Its dimensions were only 12⅝ inches wide, by 7½ inches high, and 7 inches deep. See Figure 2. It sold for $26, including tubes. No other PUP radios were manufactured after this one.

CROSLEY'S WORLD WAR II EFFORTS

The Crosley Radio Company got involved in helping the World War II effort. Besides producing army generators and items like the highly successful "Proximity Fuse" artillery warheads, which would explode when near an aerial target using a radio wave, they made small vehicles as well.

In the military's field of "Light Weight Vehicles" (2,500 pounds), the Willy's "Jeep" became the most famous and widely used vehicle of all time. However, in another field of "Extra Light Weight Vehicles" (885 to 1,500 pounds), Crosley entered a few vehicles for the military to test.

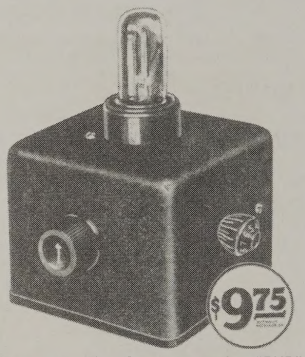


Figure 1. The Crosley 1-tube "PUP" receiver of 1925.

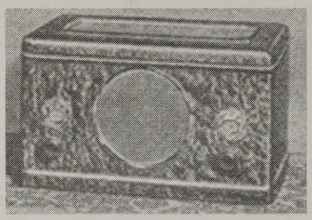

Figure 2. The Crosley 4-tube "PUP" receiver of 1932.

THE WORLD WAR II PUP AND OTHERS

Enter the 1942 World War II PUP! Figure 3 shows just how small this class of vehicle was. It was 100 inches long with room for one driver and a small area for cargo, and it had four-wheel drive. This scout car ran on a 2-cylinder opposed, air-cooled Waukesha engine developing but 13½ horsepower. Its fenders were made of canvas to keep the weight down. See Figure 4. Only 36 of these utility vehicles were ordered.

In 1940, in an earlier attempt to enter the military class, Crosley had submitted a tiny staff

Figure 3. Photograph showing just how small the Crosley "PUP" of 1942 was.

car called the D-1, as shown in Figure 5. This 12 horsepower car had rear handrails for passengers to hold onto, but it was rejected because of its low ground clearance.

Powel didn't give up easily, for he also entered the field of two-wheelers. Actually, it was in the motorcycle class. Crosley submitted an unusual bike with a single rear fork, which made it easy to change the tire, and the rear fender served as the gas tank! It utilized the same 2-cylinder, air-cooled engine used in their military vehicles. See Figure 6.

However, in 1941 the U.S. Government said, "Thanks, but no thanks" due to the bike's frame flexing problems, which caused instability.

After the war, the Crosley Radio Company was sold to Avco Corp. The Crosley name would still adorn the radios and television sets Avco manufactured until all production ended in 1958. Nevertheless, Crosley began to manufacture low priced automobiles again in 1947. Unfortunately, the Crosley Automobile Company couldn't keep up with the "Big Three's" production output and frequent style changes, and so, with less than 4,000 units sold in 1952, Powel called it quits. The PUP nameplate would never have the chance to be revived again.

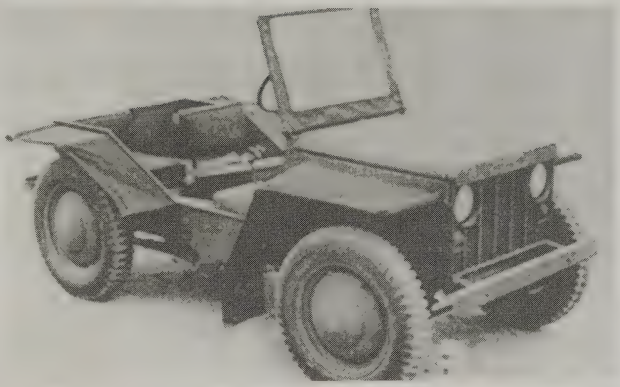

Figure 4. Frontal view of the Extra Light Class Crosley PUP utility vehicle.

TRANSISTOR RADIOS

Beauty Is Only Skin Deep

A Few Great Transistor Radios

BY PHIL MACARTHUR

A true champion of the transistor radio, Phil MacArthur tells you what to look for in a quality set. He urges you not to pass up the "plain Janes" before you look inside for clues to excellence. (Editor)

It seems that most collectible transistor radios have always been cute little things. Many of them came from Toshiba, Sony and other Japanese stylists. Rather than focus on "cute" radios, this is a survey of a few of what I consider the great transistor radios.

Just as the car collectors say, "real engines don't have valve covers," (referring to the Ford flathead V-8), I say real transistor radios have RF (Radio Frequency) amplifiers.

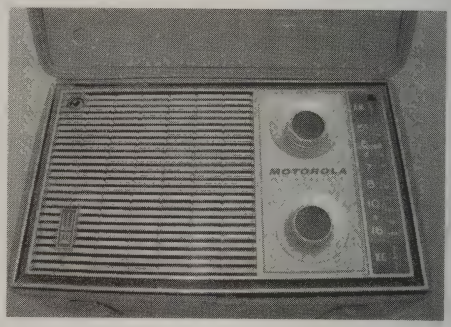
This extra stage of station pulling power may not be so important in a console or table radio that sits tuned to the same few local stations most of the time; however, in a portable that sees service in boats, on fishing and hunting trips, or at any distance from civilization, the radio frequency amplifiers make all the difference.

This survey is compiled from the pages of *Sams Servicing Transistor Radios* manuals. These give us (roughly) a chronological listing of the transistor radio's march through history. Several of these "great radios" are pictured in this article. Included are the 7-transistor Motorola Model X31N, the 8-transistor Silvertone Model 2222, and the two 10-transistor models: an Airline GEN-1258 and a Westinghouse RG21S570. Also shown is the 11-transistor Sears Model 8212. All of these great sets employ a transistor in a tuned RF stage.

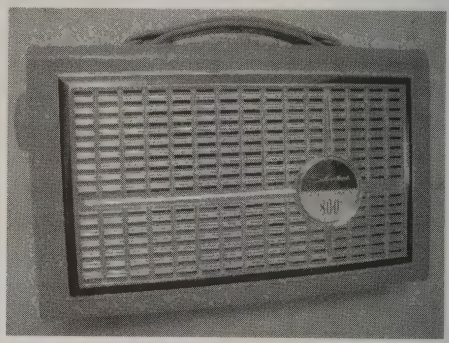
The first two Sams volumes list the early transistor radios dating from 1954, many of which had only four transistors — one functioning as a converter, two as IF amplifiers, and one as an audio amplifier. The classic Regency TR-1 is an example.

Also listed are many 5 and 6-transistor radios, all using the same basic complement as above, but some with up to three audio stages.

In Volume 3 we see the first high performance transistor portable, the Magnavox AW-100. It uses eight transistors: one transistor is added as an RF amplifier; for the converter, instead of a one transistor functioning as both a mixer and an oscillator, two separate transistors are used; and an additional IF amplifier transistor is added to make three IF amplifier stages. Volume 3 also includes the 8-transistor Zenith 500D and the 9-transistor Trans-Oceanic 1000.



The 7-transistor Motorola X31N.



The 8-transistor Silvertone 2222.

Volume 4 shows the 8-transistor Zenith Royal 750. Volume 5 includes the 7-transistor Motorola 7X23 and 7X24, the 8-transistor Zenith 760 and 8X26, and the 9-transistor Philco Allwave T-9. Here we are in 1959 and of the 28 radios, only four had RF amplifiers. There are even several shortwave sets — by Toshiba, Norelco, and Webcor — without RF amplifiers .

In my survey, I skipped ahead to Volume 10, 1961, and found only three out of the 29 transistor sets there with RF amplifiers — the big 9-transistor Admiral 909 Allwave, the 8-transistor RCA 1T5, and the 7-transistor Silvertone 1217, aka "the 700."

Sams Volume 20, covering through 1962,

shows these sets with RF amplifiers: the little Philco T-88, an 8-transistor set, and the Toshiba 9TL365s, a 9-transistor set. The 8-transistor Silvertone 2016 has an RF amplifier but only one IF amplifier!

Almost all of the transistor sets with an FM band have an RF amplifier for the FM section, but most drop the RF amplifier in the AM section. The Zenith Royal 2000, the InterOceanic and Trans-Oceanic series, however, have RF amplification in both AM and FM modes.

To find a great set, which I define as one with RF amplification, you have to refer to the schematic diagram. Although you can open the back of the radio to see if there is a third section on the variable tuning capacitor which is for the RF amplifier, some sets used a broadband RF amplifier, which requires a transistor but not a third tuning capacitor section.

Left is the 10-transistor Westinghouse RG21S570, and right is the 11-transistor Sears 8212.

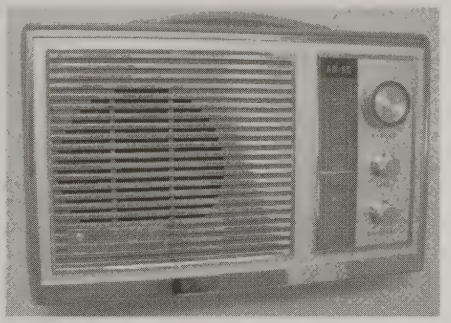
Even the transistor count isn't useful as there are loads of radios with 10-plus transistors that don't have an RF amplifier.

A project of mine is to go through all of the Sams Transistor Service Manuals and make a comprehensive listing of the really great transistor portables. This list will be included on my website: OswegoRadio.com.

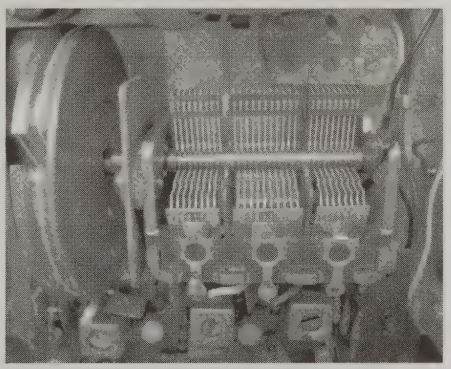
ADD A GREAT TRANSISTOR RADIO TO YOUR COLLECTION

Shouldn't part of your collection be based on quality circuit design, not just a pretty face? Next time you see a plain-Jane transistor radio at a yard sale, check inside for that telltale three-section, AM, tuning cap or a label showing an RF amplifier.

Most of these really good radios are getting near $100 on eBay, but the RCA 1T5 Globetrotter, the Silvertone 700, the Motorola 8X26, and the Philco T-88 are still under $25. Why don't you consider picking up one of these beauties and enjoy some real long distance listening on cold winter (or perhaps hot summer) nights?



The 10-transistor Airline GEN-1258.



One sign that an RF amplifier is included in an AM radio is to observe that the tuning capacitor has three sections, as in the above picture.

(Phil MacArthur, 60 W. Schyler St., Oswego, NY 13126. OswegoRadio.Com; keywestmac@verizon.net)

After 25 years of teaching in Key West, Florida, Phil MacArthur and his wife June happily retired ad returned to the "four-seasons Northeast." ("And while we were gone, you guys invented the snowblower.") They collect Zenith radios and Flavoradios. ("Who knows why.")

RADIO RAMBLINGS

My Life Before Television

A Tribute to Radio!

BY PAUL R. MOENS

Once radio was the center of family entertainment. As many of us also do, Paul Moens recalls how a certain set still figures strongly in memories of his youth. (Editor)

Most people today under the age of 60, probably don't recall life before television. As I've grown older and reflect back on my youth, I realize now what an inspirational time it was for the family unit and the purpose radio fulfilled. I was born in 1948, the only child for nine years. My parents were dairy and fruit farmers in upstate New York. They worked seven days a week, eight to twelve hours per day. We didn't take vacations, and our parlor or living room was the center of our home life. The focal point of that room was the family radio. In our case it was a 1939 Westinghouse WR-366 console, as shown in Figure 1.

Reception was never a problem. We had an outside radio antenna, 100 ft. long from the house to the barn and a ground wire that disappeared somewhere into the basement. Weekly, usually a Friday or Saturday night, we would settle down and listen to the old radio shows of the day. While I can't remember them all, I do have vivid memories of *The Lone Ranger, Wild Bill Hickcock*, and *Dragnet*. I was thrilled later in life to find that those shows were on TV into the 1960s.

I remember that our family radio was given a lot of respect, as I was never allowed to touch it without my parents' permission. Usually my father would sit beside the radio, and I would be on his lap or on the floor. My mother always sat on the couch sometimes sewing buttons, folding laundry, or just relaxing. It was never complete without popcorn or some other snack. During the winter months, my father and I would make homemade ice cream prior to settling down in the parlor. My job was turning the crank on the ice cream maker until my arm got tired.

Those old radio shows were always fast paced, even the commercials, usually in a 30-minute time frame. I always loved the background effects — organ music, an orchestra, or a familiar theme to set the mood. An announcer would introduce the characters and get the plot going. When it was done, you were given the verbal credits and invited back next week, "same time, same station."

ENTERTAINMENT AND BEYOND

The first time I heard shortwave, I was totally "blown away." There were people on there not speaking English, Amateur radio operators around the world, Armed Forces Radio and weird noises.

Figure 1. The 1939 Westinghouse WR-366 console that was the center of the Moens' family entertainment life.

Our family radio served other practical purposes. My father needed to know the weather at planting time and during the harvesting of crops, which included hay and straw. Many times in the afternoon my mother would listen to shows for housewives dealing with new recipes or homemaking ideas.

If the radio ever stopped working, it was a major catastrophic event. Today, you might compare that to not having your cellphone or computer for ten days. Repair options were never difficult. We were not a throw-away generation, and nearly every small town or community had a radio repair shop.

Radiomen even made house calls with their vans or delivery trucks. I remember watching them entering our home with their equipment, tube testers, and tube caddies. Most were actually very young men. My father explained to me that many learned their skills during World War II serving our country. If repairs couldn't be made in-house, they would take the radio with them and return it a couple of days later. How was that for service!

Keeping up with the news was always a necessity.

You could hear it that day on the radio, read about it the next day in the newspaper, or see it on a silver screen newsreel at the local movie theater a few days later. My parents and relatives told me of many historical events that they had heard on the radio for the first time. That list included the airship Hindenberg explosion and the news of the Pearl Harbor attack.

Presidents Roosevelt, Truman and Eisenhower frequently addressed the nation over the radio. Sports, especially baseball, was very popular on the radio. Their names didn't mean much to me then, but I was told that before I was born, Lou Gehrig delivered an emotional farewell address at Yankee Stadium in 1939. Jackie Robinson changed the color of the game in 1947. I was too young at the time, but another player, Bobby Thomson, hit the "Shot heard around the World" at the Polo Grounds in 1951.

Our family was always aware of the "Cold War" and the fact that world peace could never be taken for granted. My father pointed out the civil defense symbols to me on newer radios of the day and where to tune in should there be an attack or emergency.

The arrival of television was inevitable. We got our first set sometime around 1953. Both the TV and our parlor radio co-existed in the same room for a few years, but the radio and its role in the family unit would never be the same again. Eventually, the Westinghouse console was put in storage and replaced with a smaller radio in the kitchen.

Figure 2. At age 78, radioman Bill Simmons has been in business for 52 years and has no plans to retire. He currently runs Simmons TV & Satellite Dish in Lyons, New York, but is always helpful with a friend's repair work.

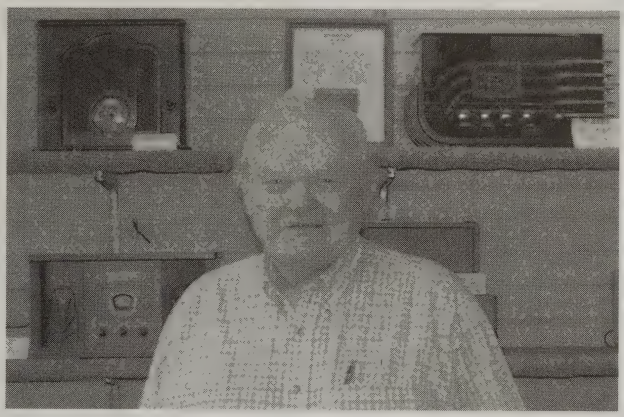

Figure 3. Now age 76, Ray Steppler of Sodus, New York, has been in the radio business since 1972. He carries on a family business started in Toledo, Ohio, in 1926. Always ready to help keep a radio working, he is currently the curator of the Sunshine Radio Museum.

OLD RADIO TODAY

I rescued the Westinghouse and brought it to my home in the early 1970s and have kept it working ever since. It's been knocked over a couple of times, has a cracked escutcheon and a few scratches, but it's still a proud fixture in my home. The memories it conjures up as I just look at it are many.

In my family the radio was a console. Other families may have sat around a tombstone, a highboy, or a battery set. Those days are gone now. My parents have passed on, and there aren't very many old radiomen left anymore. But, over the years, I have gained a great deal of respect for all the old radiomen who have kept the old radios playing. Two of them who have helped me enjoy this love of radio are shown in Figures 2 and 3.

In my area, I have found a radio station out of Hamilton, Ontario, Canada, CHML 900AM that still plays the old radio shows nightly. The AM band is not the same as it was 60 years ago — less music, more talk.

However, I am fortunate to have a son to share my memories with, and now two grandchildren. I still have a passion for antique radio and share a camaraderie with other radio collectors. The family unit has changed, as well as the world we live in. But, memories of the past live forever.

(Paul R. Moens, 6792 Miller Rd., Newark, NY 14513)

Paul Moens, a former letter carrier, currently works for the New York State Thruway Authority and is self-employed as a tax and financial advisor. He plans to retire soon and devote more time to collecting and restoring radios which he has done since the 1970s. His collection also includes battery portables, tabletops, and Zenith Trans-Oceanics. He was inspired by A.R.C. subscribers to write this article based on his January 2010 restoration article.

WITH THE COLLECTORS

A "Once In a Lifetime Find"

Including a Chicago Radio Laboratories AD-1

CONTRIBUTED BY ED CURRAN

Ed Curran sent this report about obtaining three radios, including a "once in a lifetime find." Two items are easily identified; however, the receiver, which closely resembles the rare Adams Morgan RA-6 receiver, is more difficult to identify. Is it or is it not the rare Adams Morgan RA-6? (Editor)

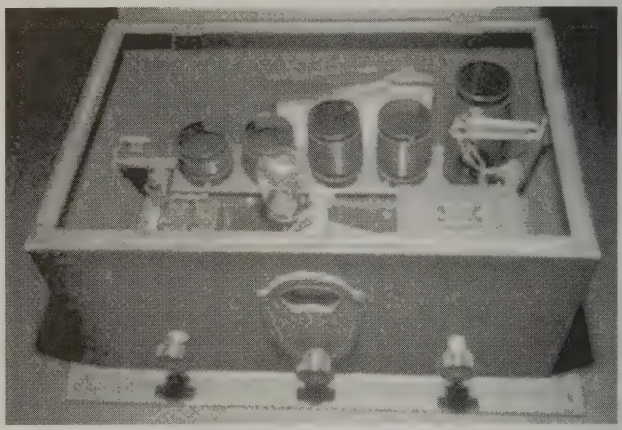

Figure 1. Ed Curran's National Thrill Box Model SW-4.

It's one of those "once in a lifetime" finds. In the mid-80s I found an estate sale with a ton of old radios and magazines that dated back to the 1920s and 1930s. The home, outside Chicago, was jammed with people. In the frenzy, I managed to grab a few old radios and some magazines and went on my way. Only later did I realize what I had purchased.

One old radio was made of metal and had a top that flipped up. Inside, it was a mess, with coils strewn about. I bought it for next-to-nothing. Later, I realized that I had purchased a National Thrill Box SW-4, shown in Figure 1.

The jumble of coils inside had simply fallen out of their holders. As you probably know, plugging them into the socket inside was how you chose the frequency range you wanted. It's in excellent condition, dates from 1929, and is still in my collection.

It turned out that the other two items, shown in Figure 2, are museum pieces from the dawn of radio — they precede commercial broadcasting. One, easy to identify because of the metal tag on the panel, is an Audion Detector from Chicago Radio Lab, the precursor to Zenith. See Figures 3 and 4. I believe this item, a Model AD-1, is from 1919. It was the eighth one built as indicated by the serial number 8. There was no tube in it, and I never got one, but I was told it takes a Marconi VT-1. Figure 5 is the AD-1 as shown in the 1920 CRL Bulletin J-20.

The receiver that came with this detector unit is the real head-scratcher. See Figures 6 and 7. It looks

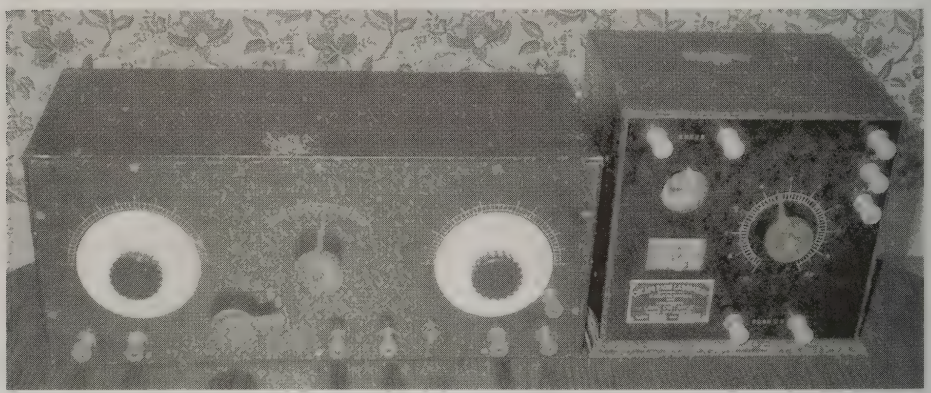

Figure 2. Ed Curran's "once in a lifetime" find. Left is the receiver which is very similar to the Adams Morgan RA-6, and right, the Chicago Radio Laboratories Model AD-1.

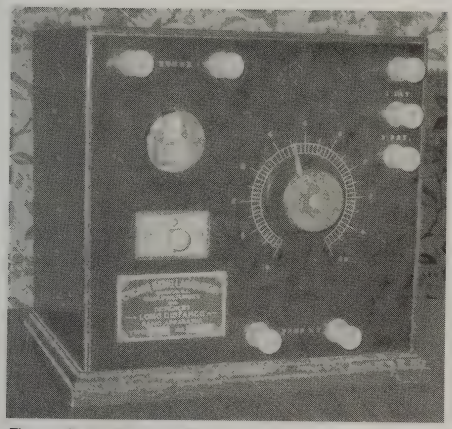

Figure 3. Ed Curran's Chicago Radio Laboratories Type AD-1.

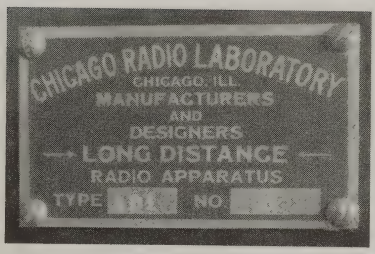

Figure 4. The metal tag on the CRL AD-1.

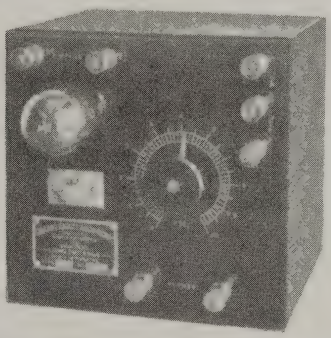
like an early Chicago Radio Labs receiver, which means it also looks like a Adams Morgan Paragon RA-6. The receiver matches up perfectly to the one being used in a 1919 Chicago Radio Laboratory photo that was published in Antique Radio Classified in 1997. The article was about Harold Cones's book on the early years of Zenith, and the radio is

(Continued on following page)



AUDION DETECTOR—TYPE AD-1.

Our Audion Detector Cabinet, type AD-1, illustrated above, was designed scientifically for use with the Marconi VT and other tubes with high vacuum, having the 4-prong bayonet type base. It consists of a highly finished golden oak cabinet, having a polished Bakelite panel front, on which are mounted the socket and proper audion controls.

The mechanical construction is exactly the same as in our other high-grade apparatus, all scales being engraved into the Bakelite panel and all parts being "sub-mounted" so that no supporting screws are visible. A mica stopping or grid condenser and grid leak of the correct size are mounted in the cabinet. Knobs are of turned hard rubber and pointers are of cast brass. All metal parts are heavily nickeled.

This cabinet is covered by the same iron-clad guarantee as the rest of our instruments and represents considerable effort in meeting the demand of the operator desiring the best in a control cabinet for the new type tubes at an extremely low cost.

Price will be found on our enclosed price-list.

Figure 5. The Type AD-1 from the 1920 "CRL Bulletin J-20." (John Terrey Collection)

Figure 6. Ed Curran's receiver looks like an Adams Morgan RA-6; however, the dials and knobs are different.

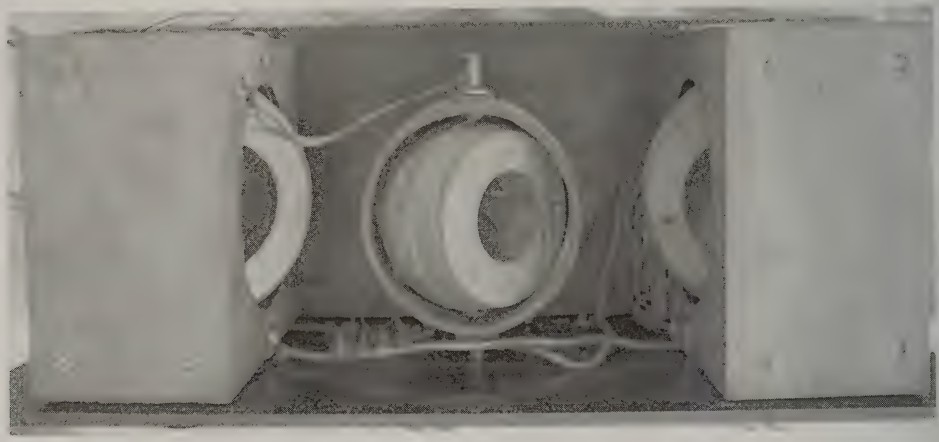


Figure 7. An inside view of Ed Curran's receiver.

("Once in a Lifetime Find," continued)

identified as a Paragon RA-6.

The tuning knobs on my receiver look like they were changed at a later date, and a plug was added for headphones.

Inside this antique receiver the variometers have a "P" and a "G" written on their wooden tops in pencil, as if to keep the manufacturing process straight.

For me, the wildest thing is what's under one of the variometers. It's a card, shown in Figure 8, being used as a shim, to level out the tuner. Taking out the screw that goes through it, I found that it's a raffle ticket to win a vacuum cleaner... at the historic 1919 Chicago Electric Show!

I haven't checked to see if I've won the vacuum cleaner`, but this early radio equipment already has me feeling like a winner.

(Ed Curran, 2231 Henley, Glenview, IL 60025)

Ed Curran is a veteran Chicago broadcaster and a collector of antique radios and microphones. If anyone has any information on the Chicago Radio Laboratory AD-1 or this mysterious receiver, your can reach him at ed@technogadgets.com.

AUCTION REPORT

20th Annual Antique Radio Auction
John Wiley Real Estate & Auction
Olney, Illinois — October 25, 2009

REPORTED BY RON RAMIREZ

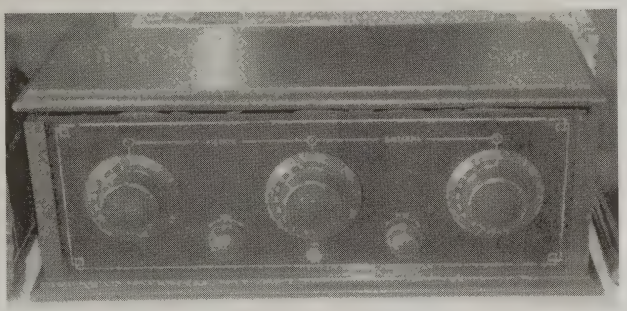
The small East Central Illinois town of Olney played host to its 20th annual antique radio auction on Sunday, October 25, 2009. For the second year in a row, the sale was handled by John Wiley Real Estate & Auction of Olney.

As with the 2008 radio auction, this sale actually took place a few miles south of Olney on IL130 at a building owned by the business and known simply as "Wiley's Place."

A number of radio collectors from Illinois and surrounding states have made this fall sale an annual tradition. Hopefully, this tradition will continue for many years to come.

Both the number and quality of the items offered at this year's sale were down. This could have been due to the current poor state of the economy. As it was, none of the radios at this year's sale went for more than $100. The top dollar item wasn't even a radio; it was a TV-7D/U military tube tester, which sold for $150. Another highlight was the red Arvin 441-T "Hopalong Cassidy" radio which fetched $100.

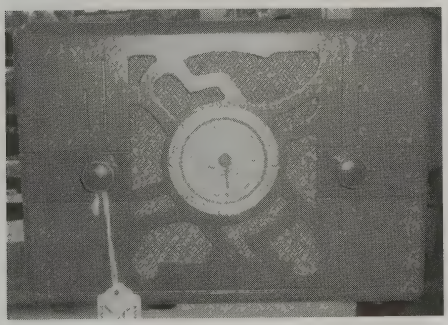
A partial listing of the items is shown below. Most of the radios and related items could be classified in "good" condition; any variance from that description is stated in the listing. Prices have been rounded to the nearest dollar.



This Minerva Distantia 3-dial TRF battery set brought a high bid of $53.

Abbreviations: WT=with tubes, NT=no tubes. Some low cost items and items in poor condition or non-specific descriptions are omitted.

Admiral 15B5, ivory $33
Ansley portable, model unknown 17
Arlington tombstone, model unknown 50
Arvin 441-T "Hopalong Cassidy," red case, early production, missing volume knob & back .. 100
Atwater Kent 32, NT 30



A Manhattan Model 106 selling at $40.

This portable RCA Strato-World Model 73X10 sold for only $20.

Prices were soft on these two Zenith consoles: left, a Model 6S254 sold for $65, and right, a Model 7S363 sold for only $33.

Atwater Kent 35, NT 13
Bendix 636-C 10
Crosley 516 tombstone 18
Emerson 425 28
Emerson 524 13
Emerson 602A 50
Emerson 616A 68
Emerson 729B, black 15
Emerson 729B, green 25
Emerson 729B, white 14
FADA 605 35
FADA cathedral, rough 16
Faradic battery, in wooden cabinet 16
GE 422, Bakelite 4
GE M81 tombstone (Canadian) 50
GE television, 12" round CRT, no back 25
General 585 38
General 4B5 40
Grundig Majestic 1097 5
Hallicrafters S-41G 13
Imperial midget radio 48
Kolster speaker 7
Lyra-Tone cathedral, model unknown 30
Majestic 5LA7, Bakelite 6
Majestic "B" eliminator 10
Manhattan 106 40
Military TV-7D/U tube tester 150
Minerva Distantia 3-dial TRF, NT 53
Philco 18, chassis only, WT 5
Philco 37-84B 25
Philco 39-17T 11
Philco 42-1002 radio-phonograph, table model ... 5
Philco 42-321TI 7
Philco 42-327 17
Philco 46-1201, Bing Crosby Special 3
Philco 46-131 5
Philco 53-706 radio-lamp, lamp parts missing 8

(Continued on following page)

A warning: *Auction prices are not current values. Our selection of auction items is not necessarily complete. A listing such as this cannot adequately include the condition of cabinets, chassis, transformers, tubes, the operating status of the set, and the inclusion of incorrect, restored or replica components, etc. Auction prices are the result of the excitement of the auction process, the skill of the auctioneer and the specific interests of the participants. Nevertheless, auction prices serve as useful references and as another element in the value determining process. The possibility of error always exists, and if we are notified,*

This Arvin "Hopalong Cassidy" Model 441-T, missing a knob and the back, sold for only $100.

(Olney Auction, continued)

Porto Baradio, missing most of its glassware 50
RCA 46X12, ivory 38
RCA 73X10 Strato-World portable 20
RCA Radiola 17, w/hood 30
RCA Radiola 28 console, no loop antenna 40
RCA Radiola Regenoflex, missing right panel 40
Sentinel 218, Bakelite 17
Silvertone 9001 20
Sonora O-22, ivory 7

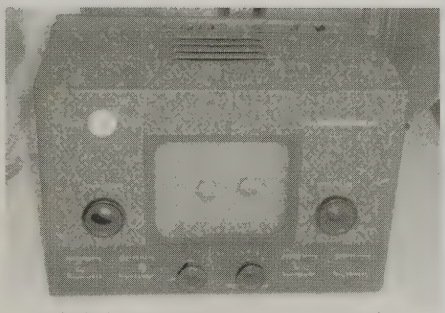
Supreme 400 tester 5
Supreme tube tester 40
Truetone D-1224 8
Truetone D-723 1
Westinghouse "Little Jewel" 28
Wilcox-Gay Recordio radio-phonograph, table model 8
Zenith 6S254 console 65
Zenith 7S363 console 33
Zenith G724, Bakelite 16
Zenith H7242, Bakelite 13



This Hallicrafters Model S-41G sold for only $13.

Ron Ramirez, 1225 Virginia St., Ferdinand, IN 47532. E-mail: mr.philco@yahoo.com. Web: www.philcoradio.com. William Wilson Auction & Realty, 1026 Granary Street, New Harmony, IN 47631. John Wiley Real Estate & Auction, c/o John D. Wiley, 721 W. Main St., Olney, IL 62450.)

William Wilson Auction — Murray Collection

New Harmony, Indiana — June 5, 2010

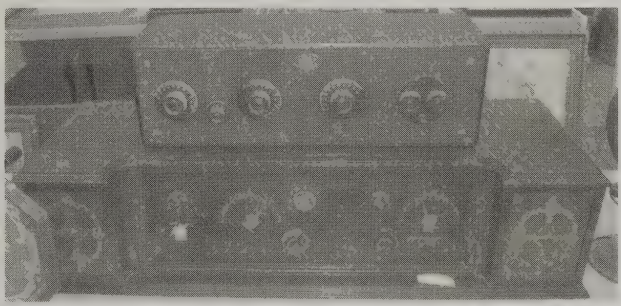
REPORTED BY RON RAMIREZ

On the first of June, 2010, while perusing a number of ads for auctions being held close to where I live, one ad stood out from the rest. It was a large auction consisting of, as the ad stated, "the lifetime collection" of Maurice and Kay Murray.

Usually when an old radio or two are in a local consignment or estate auction, they are advertised far down the list of items in the auction ad, if they are mentioned at all. But this was more than just a few old radios — it was a collection of 40 vintage radios, and it merited second billing in the auction listing (just below the Victorian furniture).

William Wilson Auction & Realty held this large, day-long sale on Saturday, June 5, 2010, at their auction center in New Harmony, Indiana, west of Evansville, Indiana. And despite the lack of national advertising (such as in Antique Radio Classified), a number of people showed up to bid on the radios, as well as on the many other items offered. Had this sale been listed in A.R.C., I believe more bidders would have shown up resulting in higher prices.

The Zenith Super VIII sold for $75.



The Atwater Kent Model 20 "Big Box," top, and the Zenith Super 27, bottom. Each sold for $55.

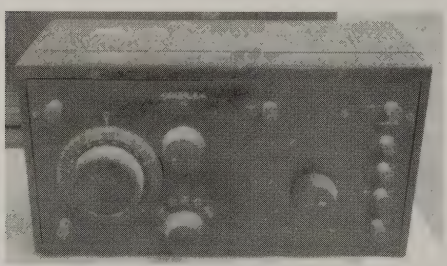
Shown above are three of the cathedrals at the auction. Left, a Crosley Model 148 sold for $70; center, a Stewart-Warner Model 102A sold for $65; and right, a Philco 70 sold for $70.

The radio sale began an hour into the auction. The auctioneers chose to sell the radios by "choice," meaning the high bidder could choose to take one or as many radios as he or she wished to take. The radios might have generated more money if they had each been sold individually. At any rate, the radio portion of the sale was virtually a bargain hunter's paradise as the radios were sold by "choice" over and over again until they had all been sold.

In fact, the high dollar radio-related item was a box of globe-shaped tubes which sold for $290. None of the radios reached the $100 level, in spite of some desirable models in the sale. Examples were a Crosley 51, a Grebe Synchrophase MU-1, a Philco 70 cathedral, and a number of Zenith sets, including a Super-Zenith VIII, a Super-Zenith 27, and two Zenith tombstones. A number of Trans-Oceanic models, including two of the prized 7G605 models, were offered.

Most of the sets could be classified in "good" condition. Many, but not all, of the radios included tubes. A list of nearly all of the radios may be seen below, and I believe the final prices are accurate. Caveat: The auctioneer did not clearly announce the final bids on some of these items. Though I was standing right in front of him during most of the radio portion of the sale, it was difficult to make out what he said, so there may be a few inaccuracies. But I believe any such inaccuracies are very few in number in the list below.

All prices have been rounded down to the dollar. Some low cost items and items in poor condition or non-specific descriptions are omitted.



The Crosley Model 51 battery set, a bit dusty on top, sold for $65.

Atwater Kent 145	$55
Atwater Kent 20 "Big Box"	55
Crosley 51	65
Crosley 148	70
Crosley 515	55
Gloritone 26	60

AUCTION REPORT

Estes Auctions — The Currien Estate

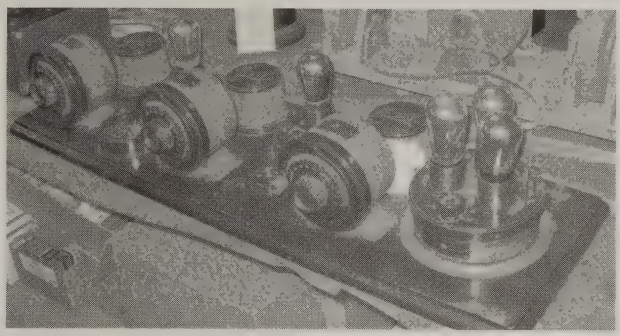
Burbank, Ohio — November 28, 2009

CONTRIBUTED BY RAY CHASE

The November Estes sale of the Currien estate was interesting in many respects. There were no real "high flyers" offered here, but there was a large selection of good books and paper, many by Edison or related to his work. Also offered were many early phonograph cylinders and parts, many odd and unusual light bulbs, and a good selection of audio hi-fi equipment.

The most interesting aspect was the large collection of homemade radios, test equipment, and crystal sets made by John Currien. Currien was very accomplished at woodworking, as shown by all the sets he made which were magnificent examples of woodworking and wood-detailing. He also wound coils and used vintage parts in the construction of his many creations.

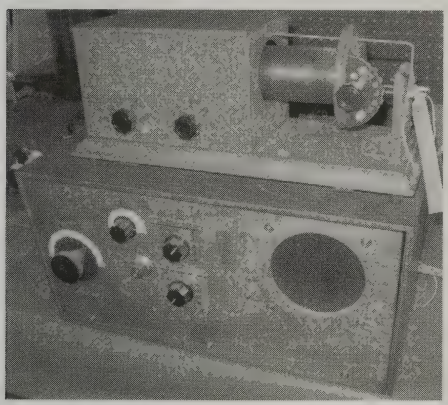
Unfortunately, homemade items such as these, no matter how beautiful and creative they are, do not bring prices commensurate with the work put into them. It is a shame that they are not recognized for the creativity that they represent, nor are they treasured by heirs or family members. Collectors seem to want recognized commercially made items for their collections, and I guess that is their right and privilege.

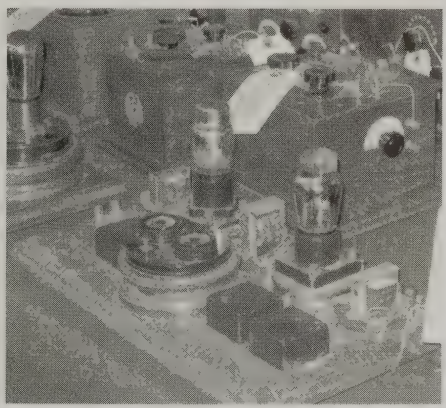


An Atwater Kent Model 10 breadboard, with green units, shared the top price of the day of $900 with the AWA "Skyscraper" set.

The usual 8:30 A.M. resale actually started at 8:45. It was larger than usual and lasted until 10:30, delaying the start of the main auction. I did not record this sale, but here are a few items that I thought were noteworthy: a Heathkit unbuilt weather station kit, selling at $22.50; a Meissner 14T chassis & panel, with two meters, in fair condition, at $50; a large TV magnifier, at $20; and a Melody Cruiser ship radio case only, no chassis, in good condition, at $140.

The weather for the auction was clear and cool. The parking lot was full of cars but there were fewer than 100 bidders listed. It was a large





A few of Currien's homemade items are shown in these two pictures. Although they exhibit fine craftsmanship, homemade items never fetch top prices. Only the loose coupler in the left picture and two other items brought over $100.

sale with many side auctions of transistor radios, auctions of radio parts, as well as phonograph parts and records. There were several auctions of books and paper, and large lots of tubes.

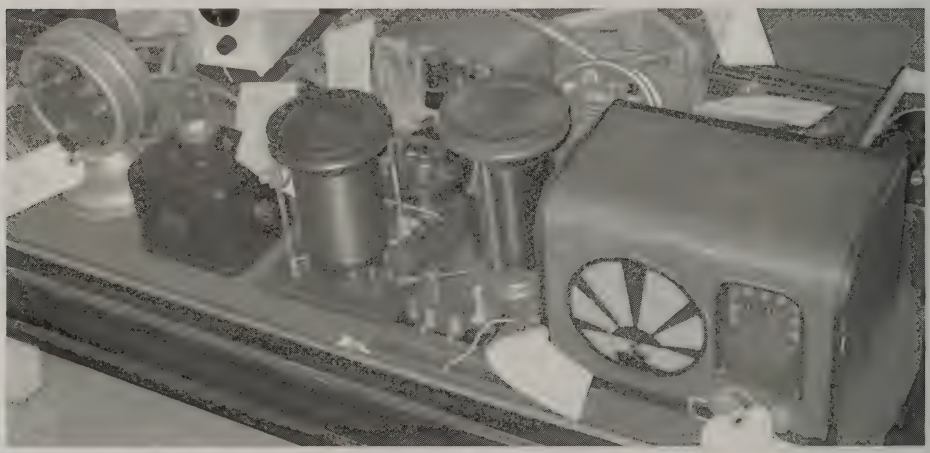
These side sales kept me running back and forth, as there were items I personally wanted in several of them. My wife Edith helped out with some recording, but quite a few items in the main auction were missed. Many of the hardcover books were quite collectible and hard to find, and it is unfortunate that I could not record their sale prices. None of the many side auctions were recorded.

About midafternoon, the number of bidders dwindled down to the hardliners who usually stay until the bitter end, and prices were falling accordingly. All the side auctions had drained away some of the money. Since it was so close to Christmas, maybe the imminent needs of holiday shopping was inhibiting higher spending. Nonetheless, I recorded a sales total of about $31,590, and the total could be significantly higher, considering all the side auctions that I missed, especially the better books that were drawing high prices. As usual, the above figure does not include the five percent buyers premium charged here.

Abbreviations: vg=very good, g=good, f=fair, p=poor, N.O.S.=new old stock, gf=good

(Continued on following page)

Most Estes auctions include numerous "paper" items — catalogs, magazines, books, etc. — as shown here. Unfortunately, they are often sold "by choice" making prices impossible to tabulate.



Right is the Marconi Sunbird, a Canadian set, which sold for $105. Among the mostly crystal sets, left to right, are the Monarch, which sold for $225, the 1-tube Crosley Pup selling for $275, and two of Currien's homemade sets; the one on the right with a Crosley crystal detector sold for $200.

Sharing the top price of the day, $900, with the Atwater Kent breadboard, was this AWA "Skyscraper" set in beetle plastic, made in Australia.

A warning: *Auction prices are not current values. Our selection of auction items is not necessarily complete. A listing such as this cannot adequately include the condition of cabinets, chassis, transformers, tubes, the operating status of the set, and the inclusion of incorrect, restored or replica components, etc. Auction prices are the result of the excitement of the auction process, the skill of the auctioneer and the specific interests of the participants. Nevertheless, auction prices serve as useful references and as another element in the value determining process. The possibility of error always exists, and if we are notified, corrections will be reported.*

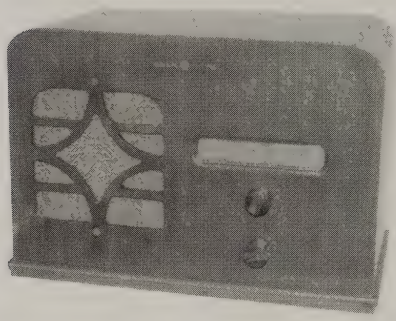
PHOTO REVIEW

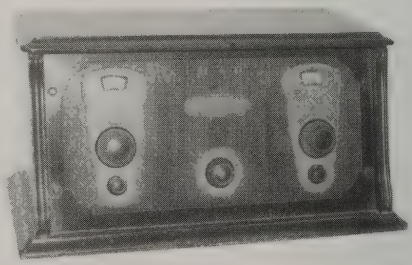
This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other old radio-related items from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short, descriptive paragraph **MUST** be included with each photo. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.



GENERAL ELECTRIC MODEL U-50 – Not much is known about this radio, except that it is a DC or farm radio, manufactured in 1936. Can any subscribers offer more information? *(Clark Trissell – Lincoln, NE)*

MAJESTIC MODEL 311 – Built in 1932 by the Grigsby-Grunow Co., this tombstone table radio uses the following seven tubes: (1) Type 80 rectifier, (1) Type 47, (1) Type 55, (1) Type 56, and (3) Type 58. *(Clark Trissell – Lincoln, NE)*

CROSLEY MUSICONE – Manufactured by the Crosley Radio Corporation of Cincinnati, Ohio, in 1925, this paper cone speaker is the "Regular Musicone." It is 12" in diameter and sold for $12.50. There were also other Musicone models — the "Super" and the "Ultra" models. *(Clark Trissell – Lincoln, NB)*



FREED-EISEMANN MODEL 30 – The Freed-Eisemann Corporation of New York manufactured this 6-tube battery set in 1926. It operates with the Neutrodyne circuit using two tuning dials. *(Clark Trissell – Lincoln, NB)*

Collector's Guide To Antique Radios 7th Edition

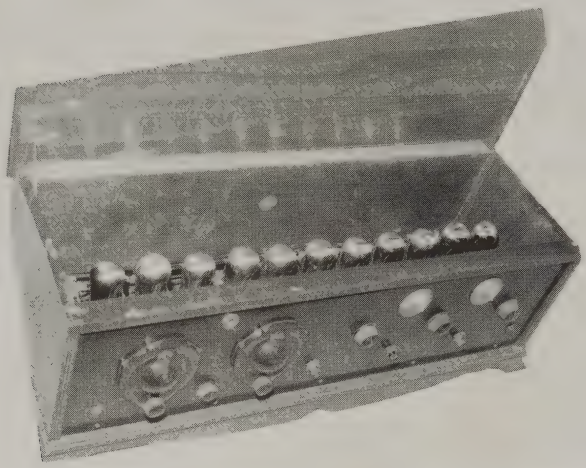
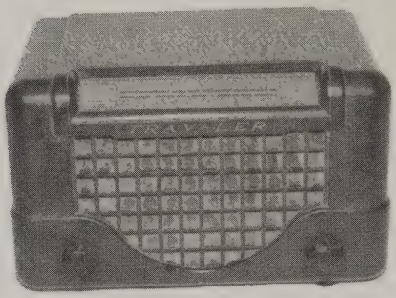
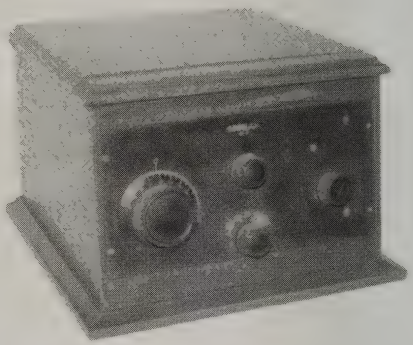
PHOTO REVIEW



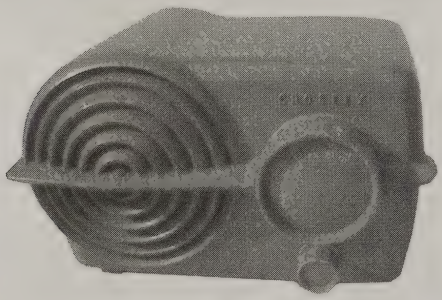
MELO-HEALD ELEVEN – Made by the Robertson-Davis Co. in Chicago, this mid-1920s, 11-tube, battery superhet uses ten Type 201A tubes and one Type 112A. All eleven coils are either Melocouplers or Meloformers. A Kansas City distributor sold the parts kit for $100.08, but would include all tubes, the cabinet, A, B, C batteries, a loop antenna and a speaker for a total price of $153. *(Ray Chase – Plainfield, NJ)*



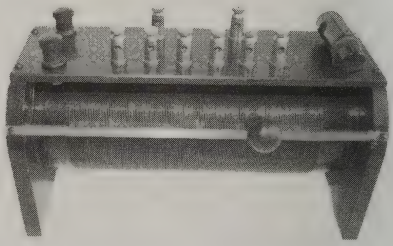
TRAV-LER MODEL 66 – This Bakelite, 7-tube table radio was manufactured by Trav-Ler Karenola Radio and Television Corp. of Chicago, Illinois. In 1951, it sold for $35. *(Clark Trissell – Lincoln, NE)*



CROSLEY MODEL 51-S – This 2-tube regenerative receiver with binding posts inside is the standard Model 51 in a deluxe cabinet. It was manufactured by the Crosley Radio Corporation of Cincinnati in 1925. *(Clark Trissell – Lincoln, NE)*



CROSLEY MODEL 11-115U – This maroon, plastic, table radio was manufactured in 1951 by the Crosley Radio Manufacturing Company of Cincinnati, Ohio. Its 5-tube chassis tuned the broadcast band only. The whole 11-series of "Serenader" table radios came in assorted colors. *(Dave Crocker – Mashpee, MA)*



R. GÄRDTNER & COMPANY "PHÄNOMA" – This is a very rare slide tuning crystal set from 1924 made by a Vienna manufacturer. Its well-known, plug-in crystal detector was made by Telux. *(Erwin Macho – Vienna, Austria)*

RADIO XLII

An Indoor Old Radio Flea Market

Biggest Show on the East Coast ★ Same Giant Location

Last Year: 546 Attendees ★ 53 Exhibitors ★ 83 Tables

Sunday, February 20, 2011 — 8:00 AM to 12:00 NOON

Registration begins for all at 7:30 AM

$12 admission (spouse & children free) – Exhibitors see below.

Westford Regency Inn — Regency Room — Westford, Mass.

(I-495 at Exit 32 — directions below)

Refreshments will be available.

Visit John Terrey's Museum of Early Radio & Wireless
(1 PM to 3 PM – Weather Permitting – 5 miles from Regency Inn –
Get directions & sign up at meet)

Pre-registration & Information:
A.R.C., P.O. Box 2-W20, Carlisle, MA 01741 – (978) 371-0512 – jvt@antiqueradio.com

Exhibitors: $12 per person/family for admission plus $35 per table. Table sizes and location assigned on a first come-first serve basis. Early registration is recommended. Last year's exhibitors in the main hall may request the same location, if we receive their paid registration by February 1, 2011. Four table limit per exhibitor. Exhibitors must occupy tables for entire show. Tables unoccupied 15 minutes prior to the end of the show will not have priority for the same location in 2012. Exhibitors may register at the door (if tables are available), or may pre-register by mailing payment to: Radio XLII, c/o A.R.C., P.O. Box 2-W20, Carlisle, MA 01741. (Make check/MO to A.R.C.; Visa, MasterCard, Discover, American Express OK, too.) If paying by credit card, exhibitors may pre-register by calling (978) 371-0512 or faxing (978) 371-7129. **Note:** Show opens to all at 8:00 AM. At 7:45 AM, exhibitors may enter the hall only to deliver goods to their tables (no setup/no unpacking/no buying/no selling) and then must return to the foyer until the doors open for everyone at 8 AM. If desired, one person may sit at the table for security purposes (no setup/no unpacking/no buying/no selling). Speak with show manager for special situations. **Cancellation Policy:** Table fee will be refunded only if requested and the table is resold. If a table is not occupied by 9 AM, a table may be cancelled and resold.

Overnight stay: Westford Regency Inn at 1-800-543-7801. Mention Radio XLII for special rates. Room reservations should be made by January 28, 2011 for special rates. Bring your family to enjoy indoor pool, health club, racquetball courts, three restaurants, bar, etc. Night skiing at Nashoba Valley Ski Area, only 2 miles away!

Directions: From I-495, take Exit 32. Follow "To Rt. 225" sign. At traffic light by gas stations, turn right onto Rt. 110-West for 0.4 miles. The Westford Regency is on the right. Use doors on right (north) side of Inn. Ramps at both show entrances! The Westford Regency Inn and Conference Center is a 193-room hotel with two restaurants and over 500 parking spaces. With over 20,000 square feet of conference space, we have room to expand our future radio meets!
